Products

BagBath®, developed in 1996, is the original bathing system that replaces the traditional bed bath with soap and water. BagBath® is CE-marked Class I - "Medical device". BagBath® has been used in many parts of Europe since 1998 with great satisfaction feedback from both patients and professionals with no registered allergic reactions.

The very few and mild non-ionic ingredients, ensures that the skin acid mantle is not washed away with the risk of desiccation and subsequent damage to the skin. Rayon / polyester cloth is unique in its ability to capture dirt and to maintain an even fluid distribution over all the wipes no matter how it is stored.

Ingredients - properties:

- Rayon Fiber - Comfort and softness, collect dirt.
- Polyester Fiber - Adds strength to the cloth.
- Clean non-ionic water - mildness and safety.
- F68 (Non-Ionic Surfactants) - FDA approved skin and wound cleanser.
- Vitamin B5 (Dexpanthenol) - Moisturizer.
- Vitamin E (Tocopherol) - Antioxidant.
- Polyaminopropyl biguanide - Mild preservative (also used in contact lens solution).

Production:

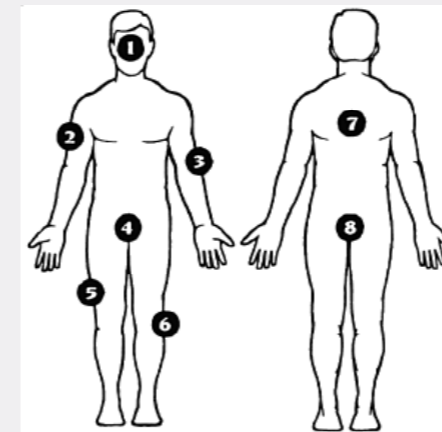

- Manufactured in clean room environment.
- Batch controlled to secure traceability.
- Tested of sponge and bacteria on each batch on external laboratory after European Pharmacopoeia categori 2.
- Each pouch having seal guaranty.
- Barrier foil secures limited moisture-loss.

The combination of ingredients to ensure that the skin acid mantle is not digested and the content of the F68 has meant that many professional users also use BagBath® for cleaning of the delicate skin around the wounds, all the way to the wound edge.

Application

The package with 4 or 8 washing clothes can be heated or cooled down before use. The cloths are used patient related after the required washing method to prevent cross contamination.

One BagBath washing cloth for each body part.

A full bed bath can be done in less than half time - saving time and money. Furthermore it increases comfort for the patient.

Articles and references from recognized Journals documents the effect and safe use of BagBath®.

"The effects of Bathing and Skin Care Practices on Skin Quality And Satisfaction With an Innovative Product. While hygienic care to patients is regarded as a necessary and therapeutic daily Nursing intervention, the traditional bed bath may have unfavorable effects on elderly individuals´ skin. A new type of bathing product may maintain or improve skin quality and possibly prevent further complications of alterations in skin integrity." Cynthia M. Sheppard, RN, MSN, and Phyllis S. Brenner, RN, PhD, Gerontology Nursing Volume 26, no 10, 2000.

BagBath® HairCare

In order to make a complete bed bath, we have simultaneously developed the new BagBath® HairCare. It is used for washing hair without using any water. BagBath® HairCare contains 100 ml of hairwash that can be used unattenuated and ready for use, straight from the bottle.
